Product Description

Austenitic Stainless Steel Seamless Pipe For General Service

Seamless stainless steel pipe is made of steel ingot or solid pipe blank through perforation, and then made by hot rolling, cold rolling or cold drawing. The specification of the seamless steel pipe is expressed by the outer diameter multiplied by the wall thickness in millimeters.

According to the different manufacturing processes, it can be: hot rolling, extrusion, cold drawing and cold rolling. According to the shape of the section, it can be divided into round tubes and special-shaped tubes. Widely used round steel tubes, but also some squares. Seamless stainless steel tubes, rectangular, semi-circular, hexagonal, equilateral triangle, octagonal, etc.
